A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission, filed on 5/29/02, has been entered.

Applicants' arguments, filed 5/29/02, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. Upon reconsideration, the following rejections and/or objections are newly applied. They constitute the complete set presently being applied to the instant application.

Claims 68-71 are rejected under 35 U.S.C. § 112, fourth paragraph, as being of improper dependent form for failing to further limit the subject matter of a previous claim.

In claim 57 the conductive oligomer is defined by a chemical formula therein. Claim 68 which depends from claim 57 redefines this formula and is thus not further limiting from claim 57. Additionally, this redefining specifically includes group(s) J which are broader than the Y group(s) of claim 57 and thus specifically fail to further limit claim 57 from which it

depends. The above issues are present in claims 69-71 as compared to claims 58, 62, and 66; respectively, also.

Claims 58 and 59 are rejected under 35 U.S.C. § 102(e) as being clearly anticipated by either of Garnier (P/N 6,096,825) or Teoule et al. (P/N 5,837,859) or under 35 U.S.C. § 102(b) over Teoule et al. (WO 94/22889).

It has been noted upon reconsideration that one embodiment of instant claim 57, for example, is where $e = 0$ thus leaving the conductive oligomer as a polymer of "Y" or aromatic groups. All of the above three references disclose aromatic polymers of this type such as polypyrrole etc. See, for example, column 2, lines 52-58, of Teoule et al. ('859). These oligomers are attached to an electrode support as a monolayer as well as to nucleic acid with spacer or linker. See, for example, Teoule et al. in column 5, line 1, through column 7, line 40. These so attached oligomers with the nucleic acid and electrode anticipate the above listed instant claims when $e = 0$ therein.

Claims 60 and 61 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 47, 48, 57, and 62-67 are allowed.
